Joomla - MediaWiki Bridge 1.3

This plugin allows you to log into Joomla and also automatically be logged into MediaWiki.

Don't forget to install and configure the MediaWiki extension

Tested on Joomla 1.5.10-1.5.22 and Joomla 1.6, MediaWiki 1.14-1.16 and PHP 5.3.2
Works with any extension.
Joomla 1.5 and 1.6 Plugin and MediaWiki extension

Installation guide (version 1.3)

Step A : Installing and Configuring the Joomla plugin.

1) Install zip file ***"mediawiki login 1.3 0910.zip"*** using standard Joomla install

2) Publish the plugin and configure the plugin as below. Set:

- Secret Word: Give some variable name here
- Cookie domain (1.1): empty, installing in subdomain* then ''.yourdomain.nl''
- Cookie prefix: the same as the mediawiki Prefix
  (the default is the mediawiki database name + ''_'' + prefix (mw_),
  example: ''databasename_mw_'')
- Cookie path: example ''/''

Step B : Installing and Configuring the MediaWiki Extension.

1) First download the MediaWiki extension ***"authjoomla2 v1.1 0910.zip"***

2) To install the mediawiki extension, unzip the ***"authjoomla2 v1.1 0910.zip"*** file to wikiroot/extensions/

3) Next, download ***"localsettings v1.1.txt"*** from this site

4) Open localsettings.php and copy all the code [Press Ctrl-C] and paste [Press Ctrl-V] it into the end of your wiki/ LocalSettings.php file

5) Now, make these changes in your MediaWiki LocalSettings.php:

- $wgAuthJoomla_security_key = ''CHANGE THIS VARIABLE NAME'';
  //The variable should have the same value of the secret word Step A
- $wgAuthJoomla_UseExtDatabase = true;
- Change the database settings
- $wgAuthJoomla_domain = 'http://www.domain.nl/'
  //location of your Joomla index.php file
- Save LocalSettings.php

* Warning: This file is not build for a subdomain. The plugin works, but the auto return after login and logout fails.
